

YORKTOWN

New York

WIRELESS INVENTORY CATALOG
June 28, 2021 - First Draft

Inventory Catalog of Existing Infrastructure

Procedure

CityScape's assessment process began by conducting extensive online research and collecting assessment data from numerous sources, including but not limited to; Town and County, FCC registration, wireless service provider and tower owner direct information. Once the assessment data was collected CityScape personally assessed each individual site by visiting each location of all known facilities and any facilities found throughout the assessment process. All information gathered was notated, verified and assembled into the following inventory catalog.

Evaluation

Each site was inspected, known data verified and any additional site information was gathered. All site notations are included in the subsequent inventory. CityScape made observations by visual inspection only and included all facilities within the Town and one mile boundary outside of the Town whose facilities provides service to the Town.

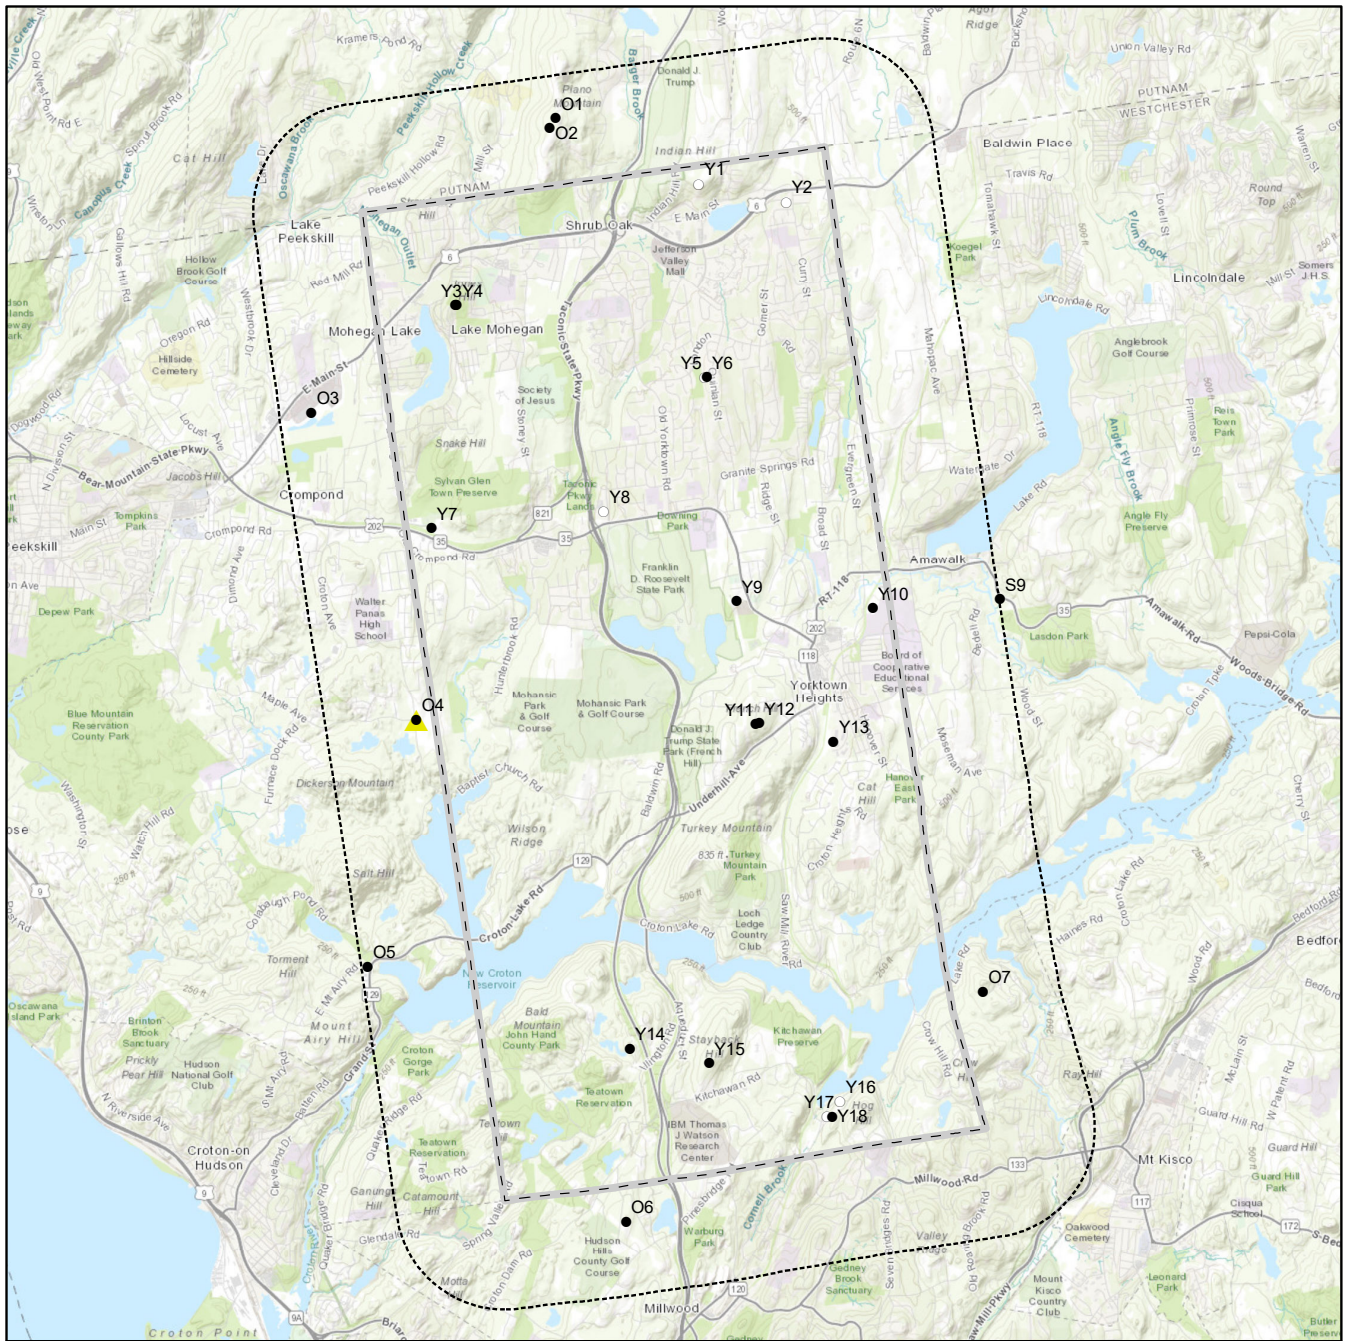

Representation

The infrastructure is listed in numeric order and shown on the map. Colored dots along with site numbers represent the cataloged structure types of wireless infrastructure as follows:

- Towers
- Base Stations

The following wireless infrastructure inventory includes a photograph and vicinity map of each tower tower or base station, along with detailed information from all data as referenced.

The designated study area includes the Town of Yorktown and a one mile radius surrounding the Town and includes towers and base stations that provide services to the Town. The facilities within the Yorktown zoning jurisdiction are referenced with the letter Y preceding the site number.

Northern Westchester County Inventory by: **Yorktown**

- Cataloged Structure Type**
- Tower (20)
 - Base Station (6)
 - ▲ Inquiry (1)
 - ▭ City Boundary
 - ⋯ 1 Mile Buffer
